

How to Apply Ear Medication

Restrain your pet as indicated above in the tableting section.

You can also get your helper to hold the animals head still by holding their jaw from underneath (for dogs the helper should wrap their hand around the dogs muzzle).

Apply the ear medication in a downward direction towards the ear canal and nose, and squirt the desired amount in **QUICKLY** (you only need to insert the tip of the nozzle into the ear canal).

Then quickly remove the bottle from the ear canal and place your fingers over either side of the ear closing the ear opening.

With your fingers still closing the ear opening, massage the product within the ear canal. You should hear a squishing or a squelching noise. If you are using ear cleaner, massage for about 10 seconds before wiping the wax etc away. For a medication, you only need to massage for 2-3 seconds.

For dogs that have very painful ears or are aggressive a muzzle may be required for your safety.
