

## How to Apply Eye Medication

Restrain your pet as indicated above in the tableting section.

Approach your pet from behind and hold their muzzle with one hand and hold the medication in the other hand.

With the hand holding the medication gently rest it on top of your pet's head and apply the medication to the eye. You may need to use your other hand which is holding the muzzle to gently pull the lower eyelid down to properly apply the product.

If you are using an ointment you will then need to gently close your pet's eyelids and massage with two fingers (one below the eye and the other above).
