

How to Tablet a Dog without Losing a Finger!

Either restrain your dog by having another person hold their body close beside them ensuring they cannot wriggle away or if you are by yourself back your dog's bottom into a corner.

Hold the tablet between your thumb and forefinger.

Hold the top of your dog's jaw grasping either side of the top jaw with your thumb and forefinger and pull the head up firmly which will naturally make his jaw open.

With the other hand which has the tablet in it, open the lower jaw and insert the tablet using your fingers to push it towards the back of the throat.

If you suspect your dog has not swallowed it hold their mouth shut and raise their head slightly while stroking their throat.
